SITE CHARACTERISATION FORM

COMPLETING THE FORM

Note: This form requires the latest version of Adobe Acrobat Reader and on PC's Windows 7

or later. Windows XP produces errors in calculations.

Note: To secure your work prior to forwarding to third parties please select Print, select Printer

"print to PDF" and name and save document.

Step 1:

Goto Menu Item File, Save As and save the file under a reference relating to the client or the planning application reference if available.

Clear Form

Use the Clear Form button to clear all information fields.

Notes: All calculations in this form are automatic.

Where possible information is presented in the form of drop down selection lists to eliminate potential errors.

Variable elements are recorded by tick boxes. In all cases only one tick box should be activated.

All time record fields must be entered in twenty four hour format as follows: HH:MM

All date formats are DD-MM-YYYY.

All other data fields are in text entry format.

This form can be printed out fully populated for submission with related documents and for your files. It can also be submitted by email.

Section 3.2 In this section use an underline _____ across all six columns to indicate the depth at which changes in classification / characteristics occur.

Section 3.4 Lists supporting documentation required.

Section 4 Select the treatment systems suitable for this site and the discharge route.

Section 5 Indicate the system type that it is proposed to install.

Section 6 Provide details, as required, on the proposed treatment system.

APPENDIX A: SITE CHARACTERISATION FORM

File Reference:
1.0 GENERAL DETAILS (From planning application)
Prefix: Surname:
Address: Site Location and Townland:
Number of Bedrooms: Maximum Number of Residents:
Comments on population equivalent
Proposed Water Supply: Mains Private Well/Borehole Group Well/Borehole
2.0 GENERAL DETAILS (From planning application)
Soil Type, (Specify Type):
Subsoil, (Specify Type):
Bedrock Type:
Aquifer Category: Regionally Important Locally Important Poor
Vulnerability: Extreme High Moderate Low
Groundwater Body: Status
Name of Public/Group Scheme Water Supply within 1 km:
Source Protection Area: ZOC SI SO Groundwater Protection Response:
Presence of Significant Sites (Archaeological, Natural & Historical):
Past experience in the area:
Comments:
(Integrate the information above in order to comment on: the potential suitability of the site, potential targets at risk, and/or any potential site restrictions).

Note: Only information available at the desk study stage should be used in this section.

3.0 ON-SITE ASSESSMENT

3.1 Visual Assessment Landscape Position: Steep (>1:5) Shallow (1:5-1:20) Relatively Flat (<1:20) Slope: Slope Comment Surface Features within a minimum of 250m (Distance To Features Should Be Noted In Metres) Houses: Existing Land Use: Vegetation Indicators: Groundwater Flow Direction: **Ground Condition:** Site Boundaries:

3.0 ON-SITE ASSESSMENT

3.1 Visual Assessment (contd.) Roads: Outcrops (Bedrock And/Or Subsoil): Surface Water Ponding: Lakes: Beaches/Shellfish Areas: Wetlands: Karst Features: Watercourses/Streams:*

^{*}Note and record water level

3.0 ON-SITE ASSESSMENT

3.1 Visual Assessment (contd.) Drainage Ditches:* Springs:* Wells:* Comments: (Integrate the information above in order to comment on: the potential suitability of the site, potential targets at risk, the suitability of the site to treat the wastewater and the location of the proposed system within the site).

^{*}Note and record water level

3.2 Trial Hole (should be a minimum of 2.1m deep (3m for regionally important aquifers))

To avoid any accidental damage, a trial hole assessment or percolation tests should not be undertaken in areas which are at or adjacent to significant sites, (e.g. NHAs, SACs, SPAs, and/or Archaeological etc.), without prior advice from National Parks and Wildlife Service or the Heritage Service.

Depth of trial	hole (m):										
Depth from gr to bedrock (m			oth from grou water table (m								
Depth of water ingress: Rock type (if present):											
Date and time of excavation: Date and time of examination:											
Depth of Surface and Subsurface Percolation Tests	Soil/Subsoil Texture & Classification**	Plasticity and dilatancy***	Soil Structure	Density/ Compactness	Colour***	Preferential flowpaths					
0.1 m											
	face Percolation \end{a}										

Note: *Depth of percolation test holes should be indicated on log above. ('Enter Surface or Subsurface at depths as appropriate).

^{**} See Appendix E for BS 5930 classification.

^{*** 3} samples to be tested for each horizon and results should be entered above for each horizon.

^{****} All signs of mottling should be recorded.

3.2 Trial Hole (co	ontd.) Evalua	tion:						
3.3(a) Subsurfac	e Percolatio	n Test for Subsoil						
Step 1: Test Hole	Preparation							
Percolation Test	Hole	1	2	3				
Depth from groun to top of hole (mm								
Depth from groun to base of hole (m								
Depth of hole (mn	n) [B - A]							
Dimensions of ho [length x breadth		х	Х	х				
Step 2: Pre-Soak	ing Test Hole	es						
Pre-soak start	Date Time							
2nd pre-soak start	Date Time							
Each hole should	be pre-soake	ed twice before the test is car	ried out.					
Step 3: Measuring	g T ₁₀₀							
Percolation Test	Hole No.	1	2	3				
Date of test								
Time filled to 400	mm							
Time water level at 300 mm								
Time (min.) to drop	100 mm (T ₁₀₀)							
Average T ₁₀₀								

If $T_{100} > 480$ minutes then Subsurface Percolation value >120 – site unsuitable for discharge to ground If $T_{100} \le 210$ minutes then go to Step 4; If $T_{100} > 210$ minutes then go to Step 5;

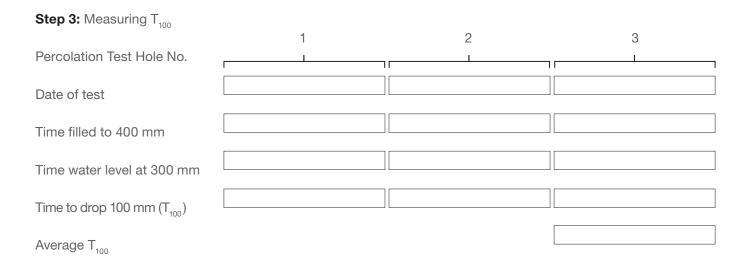

Step 4: Standard Method (where $T_{100} \le 210$ minutes)

3.4 The following associated Maps, Drawings and Photographs should be appended to this site characterisation form.

- 1. Discovery Series 1:50,000 Map indicating overall drainage, groundwater flow direction and housing density in the area.
- 2. Supporting maps for vulnerability, aquifer classification, soil, subsoil, bedrock.
- 3. North point should always be included.
- 4. (a) Scaled sketch of site showing measurements to Trial Hole location and
 - (b) Percolation Test Hole locations,
 - (c) wells and
 - (d) direction of groundwater flow (if known),
 - (e) proposed house (incl. distances from boundaries)
 - (f) adjacent houses,
 - (g) watercourses,
 - (h) significant sites
 - (i) and other relevant features.
- 5. Site specific cross sectional drawing of the site and the proposed layout should be submitted.
- 6. Photographs of the trial hole, test holes and site including landmarks (date and time referenced).
- 7. Pumped design must be designed by a suitably qualified person.

¹ The calculated percolation area or polishing filter area should be set out accurately on the site layout drawing in accordance with the code of practice's requirements.

4.0 CONCLUSION of SITE CHARACTERISATION

to choose the optimum final disposal route of the treated wastewater. Slope of proposed infiltration / treatment area: Are all minimum separation distances met? Depth of unsaturated soil and/or subsoil beneath invert of gravel (or drip tubing in the case of drip dispersal system) Percolation test result: Surface: Sub-surface: **Not Suitable for Development Suitable for Development** Identify all suitable options Discharge Route 1 Septic tank system (septic tank and percolation area) (Chapter 7) 2. Secondary Treatment System (Chapters 8 and 9) and soil polishing filter (Section 10.1) 3. Tertiary Treatment System and Infiltration / treatment area (Section 10.2) **5.0 SELECTED DWWTS** Propose to install: and discharge to: Invert level of the trench/bed gravel or drip tubing (m) Site Specific Conditions (e.g. special works, site improvement works testing etc.

Integrate the information from the desk study and on-site assessment (i.e. visual assessment, trial hole and percolation tests) above and conclude the type of system(s) that is (are) appropriate. This information is also used

¹ A discharge of sewage effluent to "waters" (definition includes any or any part of any river, stream, lake, canal, reservoir, aquifer, pond, watercourse or other inland waters, whether natural or artificial) will require a licence under the Water Pollution Acts 1977-90. Refer to Section 2.4.
